GT2 LEVER

FREEDOM TO DRIVE

GT2 FLOOR MOUNT ELECTRONIC ACCELERATOR & MECHANICAL BRAKE

Guidosimplex has been the leader in the mobility equipment industry for over 50 years. Pairing innovative designs with unrivaled technology, Guidosimplex provides stylish and safe mobility solutions. Our products are not just controls for driving, they are controls for life!

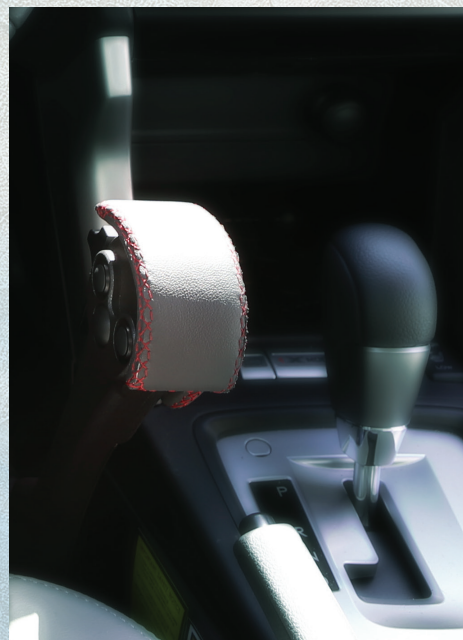

Manufactured from high-grade machined aluminum and finished in stylish Italian leather, the GT2 is easy to use and can be adapted to almost any vehicle with little to no modifications. The GT2 interfaces with the original electronic accelerator in your vehicle allowing for precise operation and consistent safety. Available with two acceleration options, accelerate by gently pulling the trigger or rocking back on the grip. Brake by pushing the lever forward with your palm. The GT2 mounts solidly on a dedicated bracket which is precisely positioned on the original anchoring points of the drivers' seat. The GT2 comes complete with two buttons for secondary control of horn or lights. The GT2 also features a brake locking system that holds the brake lever while starting the vehicle and putting it into drive.

The mechanical brake lever attaches to the arm above the brake pedal allowing normal brake operation for all drivers at all times.

ELECTRONIC PRECISION & RELIABILITY

Our electronic system produces reliable, precise, and effortless acceleration. Use our exclusive 50% switch to automatically adjust the sensitivity of your accelerator, ideal for use in traffic, steep hills, and pulling into and out of parking spaces. Do you share your vehicle with another driver? No problem! The simple press of a button deactivates the GT2's functionality, restoring the original acceleration and braking allowing all drivers to operate a vehicle with the GT2 installed.

GT2 LEVER

NEW HEIGHTS IN SAFETY

Our mission to provide you with controls for life means our products must exceed the highest quality of safety standards. Our exclusive Safe Drive feature prevents acceleration under hard braking. The construction of the lever consists of smooth beveled edges which decreases the risk of cuts and scraping. The handle is wrapped in soft Italian leather which acts as a heat barrier while providing a comfortable grip, reducing the chance of slipping.

BRAKE LOCK
