MODENA LEVER

FREEDOM TO DRIVE

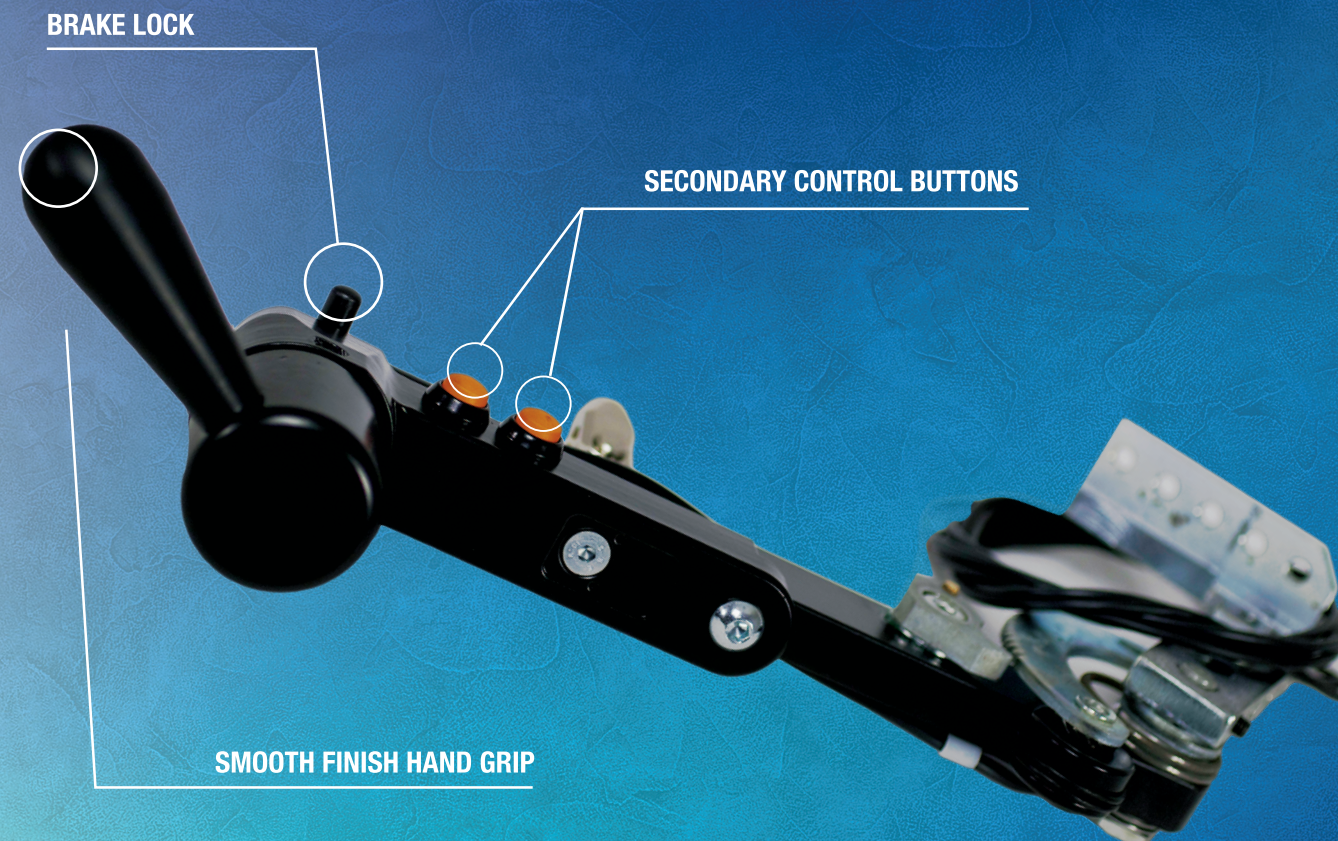

MODENA ELECTRONIC ACCELERATOR & MECHANICAL BRAKE

Guidosimplex has been the leader in the mobility equipment industry for over 50 years. Pairing innovative designs with unrivaled technology, Guidosimplex provides stylish and safe mobility solutions.

The Modena is an all-in-one electronic accelerator and mechanical brake system. Available in either a left-side or right-side steering column mount option. The system's electronics interface with the original electronic accelerator in your vehicle allowing for precise operation and consistent safety. Rotate the end of the hand grip down to accelerate and push the lever forward to brake. This thoughtful design is discreet and aesthetically pleasing. The Modena Lever comes with two optional buttons for secondary controls and features a brake locking system while starting the vehicle and putting it into drive.

The mechanical brake lever attaches to the arm above the brake pedal allowing normal brake operation for all drivers at all times.

MODENA LEVER

ELECTRONIC PRECISION & RELIABILITY

Our electronic system produces precise and effortless acceleration. Accelerating with the Modena system requires little effort and reduces user fatigue. Cruise Control and other original features of your car remain intact. Use our exclusive 50% switch to automatically reduce the sensitivity of your accelerator, ideal for use in traffic, steep hills, and pulling into and out of parking spaces. Do you share your vehicle with another driver? No problem! Use the on-off switch to deactivate the Modena Lever's functionality and restore the original acceleration to allow all drivers to operate a vehicle with the Modena Lever installed.

NEW HEIGHTS IN SAFETY

Our mission to provide you with Controls For Life means our products must exceed the highest quality of safety standards. Every feature of the Modena Lever was built with your safety in mind. Our exclusive Safe Drive feature prevents acceleration under hard braking. The smooth beveled edge construction of the lever decreases the risk of cuts and scraping.

ELECTRONIC TECHNOLOGY

- INTERFACES WITH VEHICLE'S EXISTING ELECTRONIC ACCELERATOR
- UNDER HARD BRAKING, SYSTEM DEACTIVATES ACCELERATION
- 50% ACCELERATOR ADJUSTMENT AS NEEDED
- SIMPLE ON/OFF SWITCH
